f. An inquiry into the Agency's use of carbonless paper was completed during the reporting period. This inquiry was prompted by reports that the "Legionnaires Disease" had been caused by inhalation of nickel carbonyl gas. The source of the gas was reported as coming from the burning of carbonless paper. All paper companies from which we buy such paper were contacted and it was determined that one used nickel in its paper; a nickel salt incapable of forming nickel carbonyl.

5. Projected Office of Security activities for the week of 13 September 1976 of possible interest at the Directorate level include:

Office representatives will provide security support to the DDCI and the General Counsel during their visit to San Francisco from 15-17 September.
